## Lecture 10- Taylor-Wiles pulmes I

Fix agon & global did problem S=(p, S, Y, O, { D,}ves) whose F: GFS > GLz (1F) is rank Z Det A Taylor-Wilss prime (Ar. S) is a prime v of to V& S such the I.  $q_v := Nm(v) = 1$  mod p 2.  $\nabla (Frobv)$  has distinct |F - Notheral| esquivalues. We say a Teylor-Wilss prime v has level N, N > 1, if twother 1.  $q_v = 1$  med p Rub Can and do assure IF is large snough so that all eigenvalues of all elements in P (G) are desired IF. In higher rank, the generalization of 2 vorsed depending on the context Prop Let v be a Tapler-Wilss prine (AS). For ony AE CNLO and any lift  $5:G_F \to GL_2(A)$  of  $pG_F$ , p is conjuncyate to a diagonal lift (x, g).

Free Car reduces to the case whome A is Artimen.  From FEGE a lift of Frobr. Since F (Frobr) has  H-10f Regvale, can time a basse for P sik	. 1
Frx FEGR a lift of Froby- Since F (Froby) has	distuct
It - 1 of Pry Vals, can time a basss for p sik	
$P(\mathcal{P}) = (\mathcal{P})$	
Since $D(T_{FV}) = 1$ , $D(T_{FV}) \subseteq \{+M_2(m_A), so$ so $D(T_{FV}) = 1$ , $D(T_{FV}) \subseteq \{+M_2(m_A), so$ so $D(T_{FV}) = 1$ , $D(T_{FV}) \subseteq \{+M_2(m_A), so$ Fix a top yet the tens insofia. It suffice prove that in an fixed basis $D(F)$ is diagonal.	is pre-p
so Of fectors through tons Mentra.	
Fix a top get the tone mostra. It suffice	P3 (c
prove that in our trad bosss p(4) is dragonal.	
We induct on largth (A). Con assur	
P(+) = 1+ XG L+ Mn(mx) with X=(ab), b,c	$gm_A^n$
are mix1 = O- Fresh chock shows that X is a	Jec Gred
$r \neq l > 2$	
We lenow that I to I to I to	
=> 0 = p(\$ 1p(4)p(\$) - p(4)"	1
if $k \geqslant 2$ .  We know that $\Phi + \Phi = +9^{\circ}$ $= 0 = 0 (\overline{\Phi}) \rho(+) \rho(\overline{\Phi}) - \rho(+) q^{\circ}$ $= 1 + (\overline{a}) \sigma^{\circ} \beta b - 1 + q (\overline{a}) b + d^{\circ} c g c n$ $= (0) (\overline{a}^{\circ} \beta - 1) b + d^{\circ} c e \rho q a d + s m c s (\overline{a})$	a

(relative t- Rs be)
Recall for our (possibly smply) TSS, flortagent space of Rs is given by a cohen group
H (ode)
and its dimension is
$h_{S,T}^{1}(od^{2}) = h_{S+,T}^{1}(od^{2}) + \sum_{v \in S,T} (dim_{ F} Lv - h^{c}(F_{v,p}) d^{2})$
- 5 h° (F, cd°-) - h° (Fs/F, cd°-(1))
$-\sum_{v \mid \infty} h^{c}(F_{v}, cd^{e}_{\overline{v}}) - h^{c}(F_{s}/F_{s}, cd^{e}_{\overline{v}}(A))$ $\forall h_{\infty} = h_{s+1}^{1} (cd^{e}_{\overline{v}}(A)) := h_{s-1}(H^{1}(F_{s}/F_{s}, cd^{e}_{\overline{v}}(A)) + O  \text{if } T_{s}$
$ \longrightarrow                                   $
Lv ⊆ H <sup>1</sup> (Fr, cel <sup>e</sup> ) that is image of  Dv (F(el) & Lv ⊆ Z <sup>1</sup> (Fr, cel <sup>e</sup> p)  Lv ⊆ H <sup>1</sup> (Fr, cel <sup>e</sup> p (41) is the complement of Lv  under Tote dualth.
New assure that the following hold
1. $\overline{\rho}$ is abs invol => no non scalar $G_{FS}$ - squir homes $\overline{\rho} \rightarrow \overline{\rho}(1)$ => H°( $F_{S}/F$ , od° $\overline{\rho}(1)$ ) = $\overline{\rho}$
2. F is totally real and diff (CV)=-1 for all vlso inf and CV= complex can at v.
=> h(Frod =) = 1

3.  $\forall V|P, V \not\in T, dim_{EV} - h^{\circ}(F_{V}, od \circ_{\overline{P}}) = [F_{V} \circ Q_{\overline{P}}]$ Eg This is true it  $\overline{P}|_{G_{\overline{K}}} = (\overline{X}, \overline{X}_{2})$  with  $\overline{X}_{1}|_{T_{\overline{K}}} = 1$ and  $\overline{X}_{2}|_{T_{\overline{K}}} \neq 1$  and  $\overline{D}_{V} = \overline{D}_{V}^{out}$  is the  $\overline{D}_{V}^{out}$  from

Lectures 6 and 7 + fixed def  $V_{0}$ 

4. Y v e5 \ 5 v/p3, v = 7, dm = [v-h°(F, ode)=0

Und. These assumptions

h\_s, (od p) = h\_s, (od p(1)) + (0) + 7-0.
